

### 3.3 Business Objects

The Business model provides the core RIP/RIOS services.

### 3.4 BO Tables ,BUSINESS\_ADDL\_WA,RVREPE

Writasure exports a CSV file with 1 Mio bookings. We load this table in a stage table RVREPE and insert the amounts in USD in a 1:1 table. We also use a table Business\_addl\_wa which belongs to the RDB.

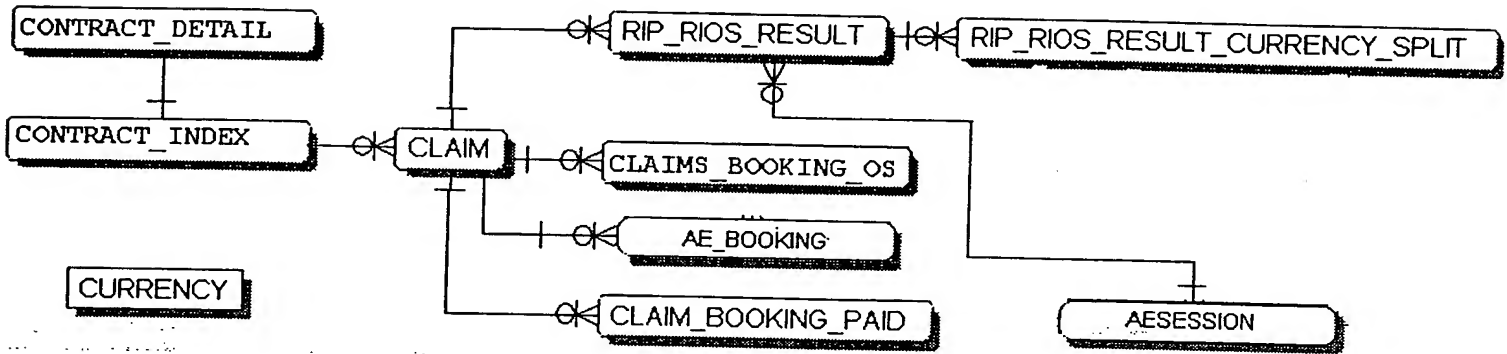

The Core entities A Contract, A Claim, Bookings and the Reinstatement conditions are extracted from the table Business\_addl\_wa and the RVREPE. The Only Claims Paid or Claims OS bookings (and Claims & Contracts) are considered. This selection reduces the effort for data access.

Each BO Table is access through a Data Access Object (DAO).

<pre> INSERT INTO AESESSION ( ID, DATEOFRUN, TIMETAG, USERNAME, SOFTWAREVERSION, SESSIONTYPE, USERCOMMENT, FK_LOAD_ID ) VALUES ( &lt;&lt;id&gt;&gt;, &lt;&lt;dateofrun&gt;&gt;, &lt;&lt;timetag&gt;&gt;, &lt;&lt;username&gt;&gt;, &lt;&lt;softwareversion&gt;&gt;, &lt;&lt;sessiontype&gt;&gt;, &lt;&lt;usercomment&gt;&gt;, &lt;&lt;fk_load_id&gt;&gt; ) </pre>	1	HI		This query inserts the session details into the AESession table.
<pre> SELECT ID, TOTALRIP, TOTALRIOS, NETRIOS, FK_MAJORCLASS, FK_CONTRACT, FK_UWYR, FK_VERSION, FK_ENDORSE, FK_CONTRF, FK_CLAIMNO, FK_CATCODE, FK_DATEOFLOSS, FK_PERIL,FK_SESSION FROM RIP_RIOS_RESULT WHERE FK_SESSION = &lt;&lt;session&gt;&gt; </pre>	1	HI		This query is used to select from rip_rios_result table
<pre> SELECT EXCH_RATE_YR_D, PRD_NUM_Q, CUR_C,EXCH_RATE_PRD_C,EXCH_Z FROM GE_EXCHANGE_RATE WHERE ORI_OF_EXCH_RATE_C ='GE' AND EXCH_RATE_TYP_C = 'A' AND TO_NUMBER(EXCH_RATE_YR_D  LPAD(PRD_NUM_Q,5,0)) = ( SELECT MIN(TO_NUMBER(EXCH_RATE_YR_D  LPAD(PRD_NUM_Q,5,0))) FROM GE_EXCHANGE_RATE WHERE EXCH_RATE_PRD_C = &lt;&lt; exch_rate_prd_c&gt;&gt; AND CUR_C = &lt;&lt;cur_c&gt;&gt; AND BSIS_CUR_C ='USD' AND ORI_OF_EXCH_RATE_C ='GE' AND EXCH_RATE_TYP_C = 'A' ) </pre>		MI		This query fetches the oldest entry in the GE_EXCHANGE_RATE table specific to the isocode and currency type, specified.

SELECT EXCH_RATE_YR_D, PRD_NUM_Q, CUR_C, EXCH_RATE_PRD_C, EXCH_Z FROM GE_EXCHANGE_RATE  WHERE ORI_OF_EXCH_RATE_C = 'GE'  AND EXCH_RATE_TYP_C = 'A'  ORDER BY EXCH_RATE_YR_D, PRD_NUM_Q, CUR_C, EXCH_RATE_PRD_C, EXCH_Z		HI		This query fetches the data from ge_exchange_rate table.
SELECT YEAR, QUARTER, ISOCODE, CURCODE, RATE  FROM SAP_RATES  ORDER BY YEAR, QUARTER, ISOCODE, CURCODE, RATE		MI		This query fetches the data from sap_rate table.
SELECT YEAR, QUARTER, ISOCODE, CURCODE FROM SAP_RATES WHERE CURCODE = <<curcode>> AND ISOCODE = <<isocode>> AND (YEAR  QUARTER) = ( SELECT (MIN (YEAR  QUARTER)) FROM SAP_RATES WHERE CURCODE = <<curcode>> AND ISOCODE = <<isocode>> ) )		HI		This query selects the oldest entry from the sap_rates table for the specific isocode and currency
SELECT YEAR, MONTH, ISOCODE, CURRENCYTYPE, RATE  FROM CURRENCY  ORDER BY YEAR, MONTH, ISOCODE, CURRENCYTYPE, RATE		LO		This query fetches data from the currency table.

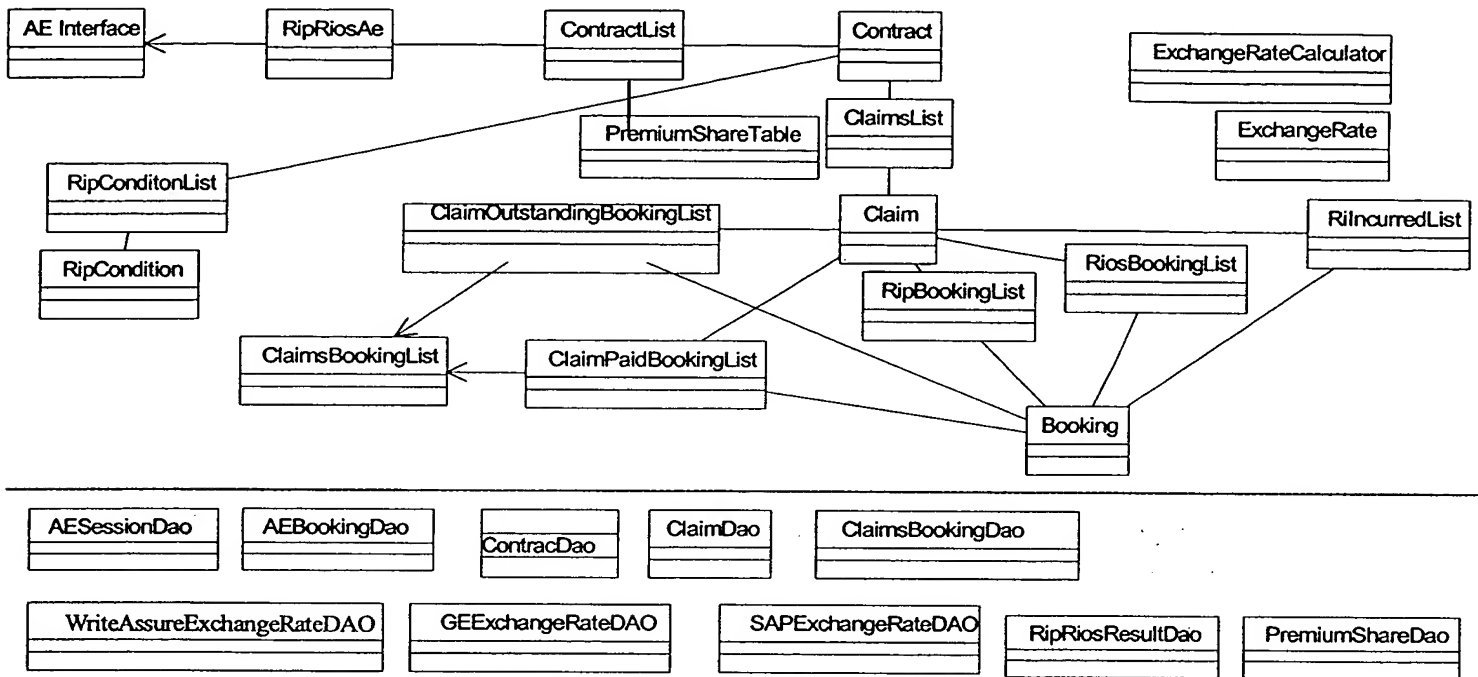

<pre> SELECT YEAR,MONTH,ISOCODE,CURRENCYTYPE FROM CURRENCY WHERE CURRENCYTYPE = &lt;&lt;currency_type&gt;&gt; AND ISOCODE = &lt;&lt;isocode&gt;&gt; AND TO_NUMBER(LPAD(YEAR,4,0)  LPAD(MONTH,2,0) ) = ( SELECT MIN(TO_NUMBER(LPAD(YEAR,4,0)  LPAD(MONT H,2,0))) FROM CURRENCY WHERE CURRENCYTYPE = &lt;&lt;currency_type&gt;&gt; AND ISOCODE = &lt;&lt;isocode&gt;&gt; ) </pre>		ME		This query fetches the oldest record from the CURRENCY table from the given isocode and currency type.
<pre> INSERT INTO LTC_REPORT.USER_INPUT ( ID, SESSIONID, INPUTPARAMETERNAME, INPUTPARAMETERVALUE ) VALUES (&lt;&lt;id&gt;&gt;, &lt;&lt;sessionid&gt;&gt;, &lt;&lt;inputparametername&gt;&gt;, &lt;&lt;inputparametervalue&gt;&gt;) </pre>	1	HI		This query inserts the user specified parameters for the calculator run into the User_Input table
<pre> SELECT NVL(MAX(ID),-1) SessionId FROM AESESSION WHERE SESSION_STATUS_IND = 'SUCCESS' AND SESSIONTYPE = &lt;&lt;sessionType&gt;&gt; AND CALCULATOR_TYPE = &lt;&lt;Calculatortype&gt;&gt; </pre>	1	ME		This query gets the previous session id for the purpose of movement calculation.
<pre> UPDATE AESESSION SET SESSION_STATUS_IND = &lt;&lt;:status&gt;&gt; WHERE ID = &lt;&lt;id&gt;&gt; </pre>	3			This query is used to update the session status to the aession table
<pre> SELECT ID FROM AESESSION WHERE ID = &lt;&lt;id&gt;&gt; AND SESSION_STATUS_IND = 'SUCCESS' AND CALCULATOR_TYPE = &lt;&lt;calculatortype&gt;&gt; </pre>	1	HI		This query validates the user specified session id.

SELECT AMOUNT, RITYPE, ISOCODE FROM RIP_RIOS_RESULT A, RIP_RIOS_RESULT_CURRENCY_SPLIT B WHERE A.ID = B.FK_RIP_RIOS_RESULT AND A.FK_SESSION = <<fkSession>> AND A.FK_CONTRREF = <<contrref>> AND A.FK_CATCODE = <<catcode>> AND A.FK_CLAIMNO = <<claimno>> AND A.FK_DATEOFLOSS = <<dol>> AND B.ISOCODE = <<isocode>> AND B.RITYPE = <<ritype>>	For ever y book ing once	Hi		This query is used to fetch the previous data for the purpose of movement calculations.
CREATE INDEX i_CLAIM_catcode ON CLAIM ( catcode )				This query creates an index on the catcode field of CLAIM
CREATE INDEX i_CLAIM_contractprimkey ON CLAIM ( FK_majordclass, FK_contract, FK_uwyr, FK_version, FK_endorse )				This query creates an index on the primary keys of the claim.
CREATE INDEX i_CLAIM_CLAIMPRIMKEY ON CLAIM ( claimno, catcode, dateofloss )				This query creates an index on the primary keys of the claim
CREATE INDEX i_CONTRACT_contrref ON CONTRACT_INDEX ( contrref_id )				Creates an index on the Contrref field of the CONTRACT_INDEX table
CREATE INDEX I_ContractDetailKey ON LTC_REPORT.CONTRACT_DETAIL(CONTRACT_ DETAIL_ID)				Creates and index on the contract_detail_id of the CONTRACT_DETAIL table.
CREATE INDEX i_contract_primkey ON CONTRACT_INDEX ( majordclass_name, contract_nbr, uwyr_yr, version_name, endorse _name )				Creates index on the primary key of the CONTRACT_INDEX table
CREATE INDEX i_CLAIMS_BOOKING_OS_catcode ON CLAIMS_BOOKING_OS ( FK_catcode )				Creates an index on the catcode field of the CLAIMS_BOOKING_OS
CREATE INDEX i_CB_OS_contractprimkey ON CLAIMS_BOOKING_OS ( FK_majordclass, FK_contract, FK_uwyr, FK_version, FK_endorse )				Creates an index on the contract primary keys of the CLAIMS_BOOKING_OS
CREATE INDEX i_CLAIMS_BOOKING_OS_kenz ON CLAIMS_BOOKING_OS ( kenz )				Creates an index on the kenz field of the CLAIMS_BOOKING_OS

CREATE INDEX i_CLAIMS_BOOKING_PAID_catcode ON CLAIMS_BOOKING_PAID (FK_catcode )				Creates an index on the catcode field of the CLAIMS_BOOKING_PAID
CREATE INDEX i_CB_PAID_contractprimkey ON CLAIMS_BOOKING_PAID (FK_majordclass, FK_contract, FK_uwyr, FK_version, FK_endorse )				Creates an index on the contract primary keys of the CLAIMS_BOOKING_PAID
CREATE INDEX i_CLAIMS_BOOKING_PAID_kenz ON CLAIMS_BOOKING_OS (kenz )				Creates an index on the kenz field of the CLAIMS_BOOKING_PAID
CREATE INDEX I_RICondFkContrefKey ON REINSTATEMENT_CONDITIONS (FK_CONTREF_ID);				Creates an index on the fk_contref_id field of the REINSTATEMENT_CONDITIONS table

## 5 Objects

## 6 RIPRIOS Calculator Method Specification

This section gives the specifications for the different classes involved in the RipRios Calculator. The classes have been divided into the following major categories:

- **Method Objects.**

This class will drive the business logic of the RipRios Calculator. It can be considered as the engine for the calculator. The following control class is identified for the calculator.

1. RipRiosAEController
2. RipRiosAE

- **Business Objects.**

These classes will form the business objects for the calculator. Each class provides an independent functionality. The functionality provided is invoked by them method objects or by some other business objects. The following are the main classes and Interfaces identified.

1. Contract
2. ContractList
3. InputContractFilter
4. Claim
5. ClaimList
6. ClaimOutStandingBookingList
7. ClaimPaidBookingList
8. Booking
9. InputBooking
10. EstimatedBooking
11. ClaimPaidBookingList
12. ClaimBookingList
13. RlIncurredBooking
14. RlIncurredBookingList
15. RIOSBooking
16. RIOSBookingList
17. RIPBooking
18. RIPBookingList
19. RIPCondition
20. RIPConditionList

- 
21. BusinessObject
  22. ExchangeRateCalculator
  23. ExchangeRate
  24. WriteAssureExchangeRate
  25. GEExchangeRate
  26. SAPExchangeRate
  27. AESession
  28. AEBooking
  29. AEBookingList
  30. AggregatedBooking
  31. Auditable
  32. MovementController
  33. Result (Interface)

- **DataAccess Objects**

1. ContractDAO
2. RIConditionDAO
3. ClaimDAO
4. ClaimBookingDAO
5. PremiumShareDAO
6. JDBCConnectionConfiguration
7. JDBCConnectionConfigurationFactory
8. AbstractDAO
9. AESessionDAO
10. AEBookingDAO
11. RipRiosResultDAO
12. ExchangeRateBase
13. ExchangeRateDAO
14. GEExchangeRateDAO
15. SAPExchangeRateDAO
16. WriteAssureExchangeRateDAO

---

- **Policy Objects**

1. GenericPolicy
2. ExceptionPolicy
3. HistoryPolicy
4. IncrementalPolicy
5. SapRatePolicy

---

## 6.1 RipRios Life Cycle Mode

This mode deals with the incremental calculation of the Rip and Rios values for a contract over its entire life, month by month.

This mode makes use of a Controller (the RipRiosAEController) to invoke the RipRiosAE over the range of cut off dates.

The start date and the end date provided by the use are used to calculate the list of cut-off dates. These cut-off dates are fed to the Accounting Engine, one by one.

The controller generates RipRiosAEController.xml. This XML contains the details, such as start date, end date, session id and previous session id, about each AE run.

## 8 Standard Operation Procedures (SOP)

### 8.1 Load & Refresh Database

Step	Description
1	Switch to P:\Shared Folders\LTC Accounting\3_Design\db\Softclose\OracleLoad\Rvrepe
2	Zip the old version RVREPE in the sub folder Load as backup.
3	Ask Kurt [REDACTED] for the newest Version of the RVREPe. Copy this file in the Load folder.
4	Confirm with the user community the delete & update of the tables RVREPE, CONTRACT_DETAIL, CONTRACT_INDEX, REINSTATEMENT_CONDITIONS, PREMIUM_SHARES, CLAIM, CLAIMS_BOOKING_PAID, CLAIMS_BOOKING_OS, RIP_RIOS_RESULT, RIP_RIOS_RESULT_CURRENCY_SPLIT, AESESSION, AEBOOKING,
5	Execute RvrepeDropCreateGrant.sql
6	Execute LoadRVREPE.bat (approx. 1 hour) Known issues: The NLS variables could cause problems with the decimal separators in numbers. Furthermore, did we receive changing formats of RVREPE (e.g. Fixed Table column width)
7	Execute a SELECT COUNT(*) FROM RVREPE The outcome should be greater than 934529 rows
8	Execute the Index SQLs: (add it to the vss.) CreateIndexRVREPE_CONTRACT_PRIM.sql CreateIndexRvrepeKENZ.sql CreateIndexRVREPE_CATCODE.sql CreateIndexRVREPE_CONTREF.sql CreateIndexRVREPEClaimno.sql CreateIndexContractPrimKey.sql CreateAllIndex.sql (All Cognos Cube related Indices)
9	A 1:1 table represent all bookings of RVREPE in USD. Therefore we have to execute the SQL "2608Dycreate rvrepe_amountusd.sql" and SQL 2608Dyinsert_into_rvrepe_amountusd.sql

10	Check the state of the CURRENCY table: Do this table contains the Currencies of the current month? SELECT * FROM CURRENCY WHERE MONTH = 8 AND YEAR = 102
11	Execute a SELECT COUNT(*) FROM BUSINESS_ADDL_WA The outcome should be greater than 211602 rows
12	Confirm with the user community all booking codes of 'Claims Paid' & 'Claims Outstanding'. If the list of KENZ is changed, please manipulate the following SQLs accordingly. See Table ACCOUNT_MAPPING
13	Create CLAIMS_BOOKING_PAID and CLAIMS_BOOKING_OS (see SQL CreateClaimBookingOS.sql and CreateClaimBookingPaid.sql)
14	<p>Execute the LoadHistoryTable.java to extract all the records out of the RVREPE and the BUSINESS_ADDL_WA tables. All the input tables relevant to the Rip/Rios calculator will be loaded/updated with the latest dump of the RVREPE and the BUSINESS_ADDL_WA tables. The tables which would be populated are LOAD_HISTORY, CONTRACT_DETAIL, CONTRACT_INDEX, PREMIUM_SHARES, REINSTATEMENT_CONDITIONS, CLAIM, CLAIMS_BOOKING_PAID and CLAIMS_BOOKING_OS.</p> <p>BUSINESS_ADDL_WA would load the CONTRACT_DETAIL and the REINSTATEMENT_CONDITIONS tables.</p> <p>The RVREPE would load CONTRACT_INDEX, CLAIM, CLAIMS_BOOKING_PAID and CLAIMS_BOOKING_OS</p> <p>LOAD_HISTORY is feeded when the LoadHistoryTable.java program is invoked.</p>
15	Check the state of the CONTRACT_DETAIL table. Are there any additional Contracts in Writasure? Are any of contract parameter changed? Load the newest version if any delta is obvious. The load program is to be run again.
16	Inform Cognos Support and demand a Cube refresh.
17	<p>Execute a SELECT COUNT(*) FROM CONTRACT_DETAIL The outcome should be greater than 41695 rows</p> <p>Execute the following SQL and make sure that you only get one row:</p> <p>SELECT * FROM CONTRACT_DETAIL WHERE MAJORCLASS_NAME = 'N' AND CONTRACT_NBR = 449 AND UWYR_YR = 2000 AND VERSION_NAME = '0' AND ENDORSE_NAME = '00'</p>
18	Execute a SELECT COUNT(*) FROM CONTRACT_INDEX

	<p>The outcome should be greater than 5282 rows</p> <p>Execute the following SQL and make sure that you only get one row:</p> <pre>SELECT * FROM CONTRACT_INDEX WHERE FK_MAJORCLASS = 'N' AND FK_CONTRACT = 449 AND FK_UWYR = 2000 AND FK_VERSION = '0' AND FK_ENDORSE = '00'</pre>
19	<p>Execute the following</p> <pre>SELECT COUNT(*) FROM REINSTATEMENT_CONDITIONS WHERE REINST_ID = 1 AND FK_LOAD_ID = 1</pre> <p>The outcome should be greater than 15534 rows</p> <pre>SELECT COUNT(*) FROM REINSTATEMENT_CONDITIONS WHERE REINST_ID = 2 AND FK_LOAD_ID = 1</pre> <p>The outcome should be greater than 740 rows</p> <pre>SELECT COUNT(*) FROM REINSTATEMENT_CONDITIONS WHERE REINST_ID = 3 AND FK_LOAD_ID = 1</pre> <p>The outcome should be greater than 139 rows</p> <pre>SELECT COUNT(*) FROM REINSTATEMENT_CONDITIONS WHERE REINST_ID = 4 AND FK_LOAD_ID = 1</pre> <p>The outcome should be greater than 44 rows</p>
20	<p>Execute a SELECT COUNT(*) FROM CLAIM</p> <p>The outcome should be greater than 24419 rows</p> <p>Execute the following SQL and make sure that you only get one row:</p> <pre>SELECT * FROM CLAIM WHERE FK_MAJORCLASS = 'N' AND FK_CONTRACT = 449 AND FK_UWYR = 2000 AND FK_VERSION = '0' AND FK_ENDORSE = '00'</pre>
21	Execute a SELECT COUNT(*) FROM CLAIMS_BOOKING_PAID

	The outcome should be greater than 92574 rows
22	Execute a SELECT COUNT(*) FROM CLAIMS_BOOKING_OS The outcome should be greater than 115832 rows
23	Execute the following SQL SELECT SUM(REINST_NBR) FROM REINSTATEMENT_CONDITIONS WHERE FK_CONTREF_ID = 'C-000417-1992-0-00' AND FK_LOAD_ID = 1  Execute the following SQL and make sure that the <b>reinst_cnt</b> is equal to the <b>total sum of the reinst_nbr</b> for that particular contract. SELECT REINSTS_CNT FROM CONTRACT_DETAIL WHERE CONTREF_ID = 'C- 000417-1992-0-00' AND AND FK_LOAD_ID = 1  The result of both these queries should be the same for a particular load id.
24	Execute a SELECT COUNT(*) FROM CONTRACT_INDEX WHERE MAJORCLASS_NAME = 'C' The outcome should be greater than 423 rows  Execute a SELECT COUNT(*) FROM CONTRACT_INDEX WHERE MAJORCLASS_NAME = 'M' The outcome should be greater than 720 rows  Execute a SELECT COUNT(*) FROM CONTRACT_INDEX WHERE MAJORCLASS_NAME = 'N' The outcome should be greater than 3726 rows
25	SELECT COUNT(*) FROM CONTRACT_DETAIL WHERE EXPIRYDATE_DATE IS NULL The outcome is 9 rows  SELECT COUNT(*) FROM CONTRACT_DETAIL WHERE INCEPTIONDATE_DATE IS NULL The outcome is 9 rows

26	<p>Execute a SELECT COUNT(*) FROM CLAIMS_BOOKING_OS WHERE KENZ = 4351</p> <p>The outcome should be greater than 115832 rows</p> <p>Execute a SELECT COUNT(*) FROM CLAIMS_BOOKING_OS WHERE KENZ = 4204</p> <p>The outcome should be 0 Rows</p>
27	<p>Execute a SELECT COUNT(*) FROM CLAIMS_BOOKING_PAID WHERE KENZ = 4204</p> <p>The outcome should be greater than 92114 rows</p> <p>Execute a SELECT COUNT(*) FROM CLAIMS_BOOKING_PAID WHERE KENZ = 4351</p> <p>The outcome should be 0 Rows</p>
28	<p>The config folder should be present in the current directory, and it should contain the RipRiosRunLogConfig.txt file. This config file must define a RollingFileAppender for the root category. This is accessed while initializing the log environment for the application run.</p>

## 8.2 Run RIP/RIOS Accounting Engine

### Requirements

JUnit 3.7

Oracle JDBC driver classes12.zip

## Call of RIP/RIOS Accounting Engine

<pre>java com.ge.gefre.ltca.AppMain -riprios -user &lt;user-name&gt; -cutoffdate &lt;dd/mm/yyyy&gt; -exchangeratedate &lt;dd/mm/yyyy&gt;</pre>	
<pre>OR java com.ge.gefre.ltca.AppMain -ripriosHistory -user &lt;user-name&gt; -StartDate &lt;dd/mm/yyyy&gt; EndDate &lt;dd/mm/yyyy&gt; -exchangeratedate &lt;dd/mm/yyyy&gt;</pre>	
-user	The name will be used to create a Session key. Please insert your unique name. You could also concatenate some explaining text in order to describe the particular run e.g. Dan-Q4-1998, Job-NewDataLoad-Q3-2002 ( <b>Mandatory</b> )
-cutoffdate	All bookings with a billing month and billing year less equal than the given date will be selected. Currently, the day isn't important in the Revenue Report scenario, but in a RDB environment. ( <b>Mandatory for -RipRios</b> )
- exchangeratedate	We use the default Q2/2002 as Booking level currency exchange dates. If you want to specify any other date for testing purpose, use this flag. ( <b>Non Mandatory</b> ) Default: Q2/2002
-exchangetable	This specifies the exchangerate table to be used for getting the currency exchange rates for the calculations. ( <b>Non Mandatory</b> ) Default: ge_exchange_rate.
-policy	This specifies the policy to be used in case the exchangerate is not found. ( <b>Non Mandatory</b> ) Default: Exception policy.
-sessiontype	This parameter specifies the type of run. (Example productive or temp). ( <b>Non Mandatory</b> ) Default: None
-usercomment	Through this parameter the user can feed his comments before commencing the run. ( <b>Non Mandatory</b> ) Default: None

-loadid	Through this field the user can specify the specific load of the database that the calculator should use for the calculations. <b>(Non Mandatory)</b> Default: The most recent load is used as the default.
-previousession	This parameter allows the user to specify the session, which should be used for movement calculations. <b>(Non Mandatory)</b> If the user specified session is invalid the calculator is halted. If this is not specified Balance is inserted as Movement.
- contractratepolicy	Can specify true or false. If this value is false, user specified / default exchange rate date will be used instead of Inception date, for Contract level conversions. <b>(Non Mandatory)</b>
-whereclause	Where clause for Contract fetch. The Contract fetch can be limited by this where clause. <b>(Non Mandatory)</b>
-startdate	This is a mandatory parameter for the RipRiosHistory run. It specifies the date from which cutOffDate generation starts. <b>(Mandatory for RipRiosHistory)</b>
-enddate	This is a mandatory parameter for the RipRiosHistory run. It specifies the date upto, which the cutoff dates, are to be generated. <b>(Mandatory for RipRiosHistory)</b>
-noauditsummary	This is a flag that specifies whether to generate RipRiosResult.xml. If it is specified then ripriosresult.xml is not generated. <b>(Non Mandatory)</b>
-noauditcontract	This is a flag that specifies whether to generate Contract xmls. If it is specified then contract XMLs are not generated. <b>(Non Mandatory)</b>
-whereclause	This is used to restrict the number of Contracts for RipRios calculation. The WhereClause has to be in proper SQL format. <b>(Non Mandatory)</b>

**Example:**

```
java com.ge.gefre.ltca.AppMain -RipRios
-User -Job-V1.05-Q4-2001 -CutOffDate 30/12/2001
-ExchangeRateDate 30/12/2001 -ExchangeTable currency
-Policy ExceptionPolicy -SessionType productive
-UserComment "Quarter 2 Run" -LoadId 1 -PreviousSession 1073
-ContractratePolicy [true/false] -WhereClause "CI.UWYR_YR = 1976"
-StartDate <dd/mm/yyyy> -EndDate <dd/mm/yyyy>
```

For convenience, you can use the following batch:

RunDb.bat %1 %2

java com.ge.gefre.ltca.AppMain -RipRios -User %1 -CutOffDate %2

**Exchange Rate Tables Available:**

Table Name	Description
Currency	Exchange rates are retrieved from the WritAsure Exchange Rate Table
ge_exchange_rate	Exchange rates are retrieved from the Exchange Rate Table
Sap_rates	Exchange rates are retrieved from the sap exchange Rate Table

**Exchange Rate Policies Available:**

Policy Name	Description
Exception Policy	If Exchange Rate for the specified date does not exist, Exception is raised.
History	If Exchange Rate for the specified date does not exist, search is

Policy	done by going back in history through all records, till it finds a rate. If rate is still not found, Exception is thrown.
Incremental Policy	If Exchange Rate for the specified date does not exist, search is done on Daily, Monthly, Quarterly and Yearly basis. If rate is still not found, Exception is thrown
Sap Policy	This has to be used with Sap_Rates table. If Exchange Rate Date specified is Q4 2001 or less, Q4 2001 rates will be used, else rates for specified date will be used. If rates are not found for these dates, Exception is thrown.

### **8.3 Build RIP/RIOS Accounting Engine**

Switch to the Build folder of the current version and delete the folder build\build here. Make sure, that all settings in BUILD.BAT are valid for your box. Run the following:

build core -Dversion=1.03

## 2 Core Data Tables

The source, destination and intermediated tables needed by the algorithm are described here. All external tables referenced by the IBNR Generator are described by the LTC\_Report Scheme and are found in DLTC-E.

### 2.1 Treaty Header

Treaty header data is within the table LTC\_Report.Treaty\_Header. For completeness the entire table is shown below with fields required by the IBNR Generator marked with an "x".

Treaty_Header as of 23 Apr 2003		
Field	Format	Required
EST_DIM_I	number	
DELETED	number(1,0)	x
MODIFICATION-DATE	date	
ACTION	varchar2(32)	
FK_SESSION	integer	
BUS_DIM_I	number(10,0)	
SRC_SYS_N	varchar2(9)	to book
ORIG-BUS-REIN-C	varchar2(5)	to book
CDNT_I	varchar2(7)	to book
BRKR_I	varchar2(7)	to book
DIR_INDR_F	varchar2(1)	to book
UWG_YR_D	number(5,0)	to book
METH_PLACING_C	varchar2(3)	
INCEPTION_D	date	x
EXPIRY_D	date	x
CUR_C	varchar2(5)	x
SEC_NUM_Q	number(3,0)	
MAXLIMIT	number(13,0)	
CNTRCT_STUS_C		
CNTRCT_SYS_STUS_C		
TRTY_NUM_I	varchar2(12)	x
ESTIMATED LOSS		
CUWY STATUS		
RISKTYPE_C	varchar2(5)	
MAX_ACTG_YR_D		
ORIG_EPI_A		
ORIG_IBNR_A		
ORIG_COM_A		
ORIG_EP_A		
ORIG_RESULT_A		
ACTG_BSIS_C	varchar2(15)	x
CLM_BSIS_C		
BUS_PRTF_I	varchar2(5)	x

Cover Basis stored here. FORMAT?

Is this the portfolio number or index???

Appendix D

D-1

## 2.2 Claims Header

Claims header data is within the table LTC\_Report.CLAIMS.. For completeness the entire table is shown below. Those fields required by the IBNR Generator Algorithm are marked with an "x".

CREATE TABLE CLAIMS		
ID	NUMBER(*,0)	
CLAIMNO	VARCHAR2(18))	x ask HJ for needed values
DATEofLOSS	DATE	x
YEARofLOSS	VARCHAR2(4)	x
CATCODE	VARCHAR2(6)	x
PERIL	VARCHAR2(3)	
FK_BUS_DIM 1	VARCHAR2	deleted
FK MAJORCLASS	varchar2(1)

## 2.3 LTC\_Ledger

LTC report contains a ledger similar to RDB's accounting details, except

- The original booking codes are replaced with the new ACE Booking code groups (same level of detail as BP\_Label).
- The table does not contain as many fields as the original Accounting details.

The table description follows.

LTC REPORT LEDGER	
8 Apr 2003 21:32:52 from LTC_REPORT@dice.WORLD	
LEDGER DIM I	number
BUS DIM I	number(10,0)
SEC NUM Q	number(3,0)
TRTY NUM I	varchar2(12)
UWG YR D	number(5,0)
LOSSYEAR	number(4,0)
CLAIM NUMBER	number(7,0)
BOOKING CODE C	varchar2(5)
CUR C	varchar2(5)
AMOUNT A	number(18,2)
GBL A	number(18,2)
SOURCE C	varchar2(32)
INWD OWRD C	varchar2(7)
FY	number(4,0)
FY MONTH	number(2,0)
FY QUARTER	varchar2(2)
GERMAN GAAP REV YEAR	number(4,0)
IBNR	number
ESTIMATED LOSS	number
CMPR D	date
Booking Date	Requested by HJ
Billing Year	Requested by HJ
Billing Month	Requested by HJ

will be deleted?

RDB- booking date..still missing

Note:, booking\_Year, booking\_Month are still missing  
 Do we need claim table key?  
 What does Q at the end of a field name mean?

To get to Treaty\_Header I use: BUS\_DIM\_I + SEC\_NUM\_Q + end\_of\_period\_date

## 2.4 AE\_Bookings

All output of the Loss Year splitter goes to AE\_Bookings (which has the same format as the RDB accounting details.)

The Loss year splitter will generate "bookings" which are stored in the Treaty booking ledger table (which later goes to SAP) as well as the input table.

Field Name	Source
	As Discussed with client
Id	Sequence in Oracle Uniquely identifies a record in the output table.
SessionId	FK from Session Table
Source	[SOURCE_SYS_N] LAST_ULT_STUS.SRC_SYS_N or
reinsure	[Reinsurer] LAST_ULT_STUS.ORIG_BUS_REIR_C
book_id	See Detail :
Uw_year	[uw_year]  BUSINESS. B.UWG_YR_D
Occ_year	0
Account_year	[current Year]
Account_period	Y1
BYRP	[curentyear]
book_Branch	Blank
Bookcode	[bookcode] O/p of the IBNR
orig_curr	[Main Currency] LAST_ULT_STUS.BUS_CUR_C
Amount	[Amount] O/p of the IBNR

	If the amount calculated has a negative sign , put the signed amount in this field and keep the Sign field blank.
Sign	[sign] blank
A_type	E
claim_id	Blank
Pool_id	I Blank
Refno	Blank
Ref_type	TECHNICAL ACCNT
computer_date	<del>MM/DD/YYYY</del>
Posting_date	<del>MM/DD/YYYY</del>
treatyno	[treatyno]  Business.TRTY_NUM_I
in_out	INWARD
Dir_indir	I BUSINESS_ATTR_1.Dir_indir
branch	[branch] Lasr_Ult_Stus.Trty_Bus_Cls_C
pool_re	Blank
Cedent	[cedent] Business.cedent
Broker	[broker] Business.broker
Sap_comp	Blank
Bus_area	Blank
Agg_code	Blank
SAP_type	Blank
SAP_branch	Blank
trading_part	Blank
Bank_account	Blank
SAP_cur	Blank

Sap_aggr	YES
orig_computer_date	...
Lirma_ref	Blank
lirma_f	N
...	...

## 2.5 AE\_Session

The Accounting engine, like all others, must store session information here. This information will be used only for roll back.

Field Name	Source
Id	Primary Key Identifying a Session
DateOfRun	Current Date
TimeTag	It gives the Time Stamp
SessionType	
SoftwareVersion	This gives the version of the software.
UserName	Input to the calculator
UserComment	Input to the calculator

## 2.6 Portfolio Loss Ratio History Tables

The IBNR generator requires as input an expected loss ratio for each portfolio per loss year. These ratios could have two sources:

- Session 2 planning
- Reserve Pro

Regardless of the source the data will be entered by hand via the Loss Ratio Entry module described in a separate document. The Loss Ratio Entry module owns the tables:

Loss Ratio History View			
Col no	Name	Format	Comments
1	Portfolio_ID (primary key)	integer	Link for Port. Names, Descp.
2	SeqNum (primary key)	integer	Autoincremented sequential number
3	Loss_Year	Number (4)	
4	Loss_Ratio	Decimal(10, 2)	
5	Entry_Date	Date	
6	Booking_Comment	Text (20)	Booker's General comment indicating reason
7	SSO_ID	Integer	Link for SSO, names, initials

Note: the names and groupings of the portfolios are identical to those used by other engines. The loss Ratios are "balances".

Portfolio Description Table			
Col no	Name	Format	Comments
1	Portfolio_ID (key set)	integer	
2	Portfolio_Name	Text (6)	
3	Portfolio_Description	Text (30)	

From these two tables the IBNR generator needs a view which gives the "as of" values sorted by

- Portfolio name
- Loss Year
- Loss Ratio
